

# **Danube Strategy: Digitalisation of the Public Employment Service and the Labour Market Administration**

---

27.06.2024

# Initial setup & situation

44 applications from the end user's point of view  
17 Java applications

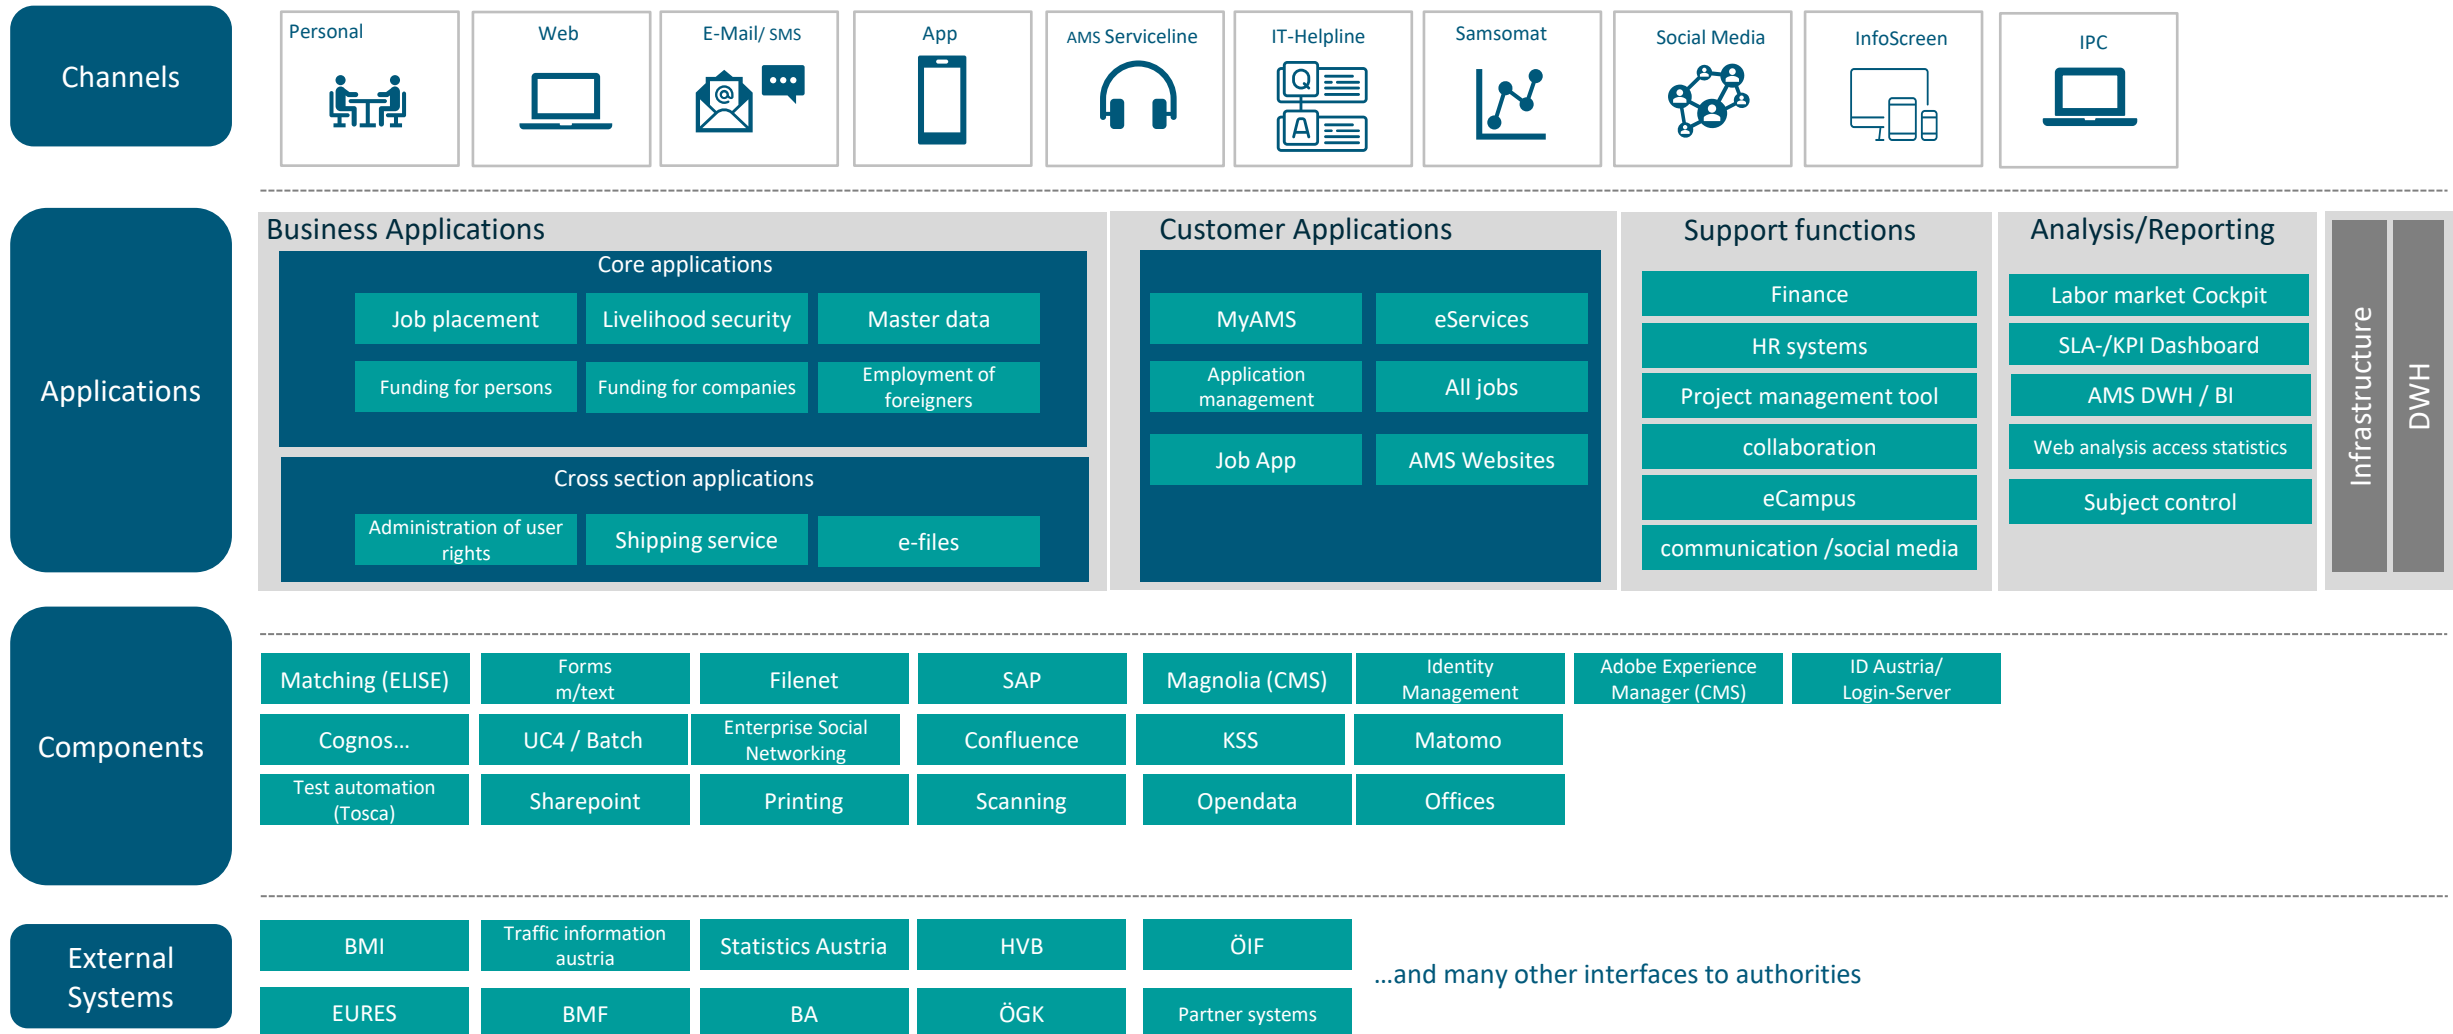

2 types of architecture

- > CA GEN | „green applications“: CA GEN with Windows client, and a client-/server-architecture with a WIN32 based fat-client
- > CA GEN with JAVA | e-services and a standard-web-browser as client for internet-applications (e.g. eAMS, eJob-Room)

- > 24,425 software modules in GEN (transactions, actions blocks, external action blocks); additionally the application components implemented in Java
- > 3,832 graphical user interfaces (primary Windows und dialog boxes)
- > 16,000 UC4 objects, 60,000 - 70,000 jobs started daily
- > 1,679 Oracle tables

# Current IT LANDSCAPE AMS (Baseline)

# History IT service provider: IBM as general outsourced partner

---

- ▶ The transition from ATOS/amsbg to IBM in the first part of decade 2010 resulted in an extensive modernisation backlog.
- ▶ The first years of IBM were characterised to establish operational stability, parallel projects were started to transform our current application landscape.
- ▶ We have chosen an approach of analysing the most holistic solutions possible, such as the job placement portal. After years of detailed analysis phase and subsequent implementation it had to be determined, that the solution did not meet the challenges and therefore could not go into production

## Transition IBM → BRZ - key facts

---

- ▶ From 09/2019 to 12/2021
- ▶ 1:1 transition of applications
- ▶ Renewal of technical environment
- ▶ Review and improvement of IT processes
- ▶ IT Security improvement
- ▶ Use of shared services provided by BRZ

Transition was managed in time/budget/quality

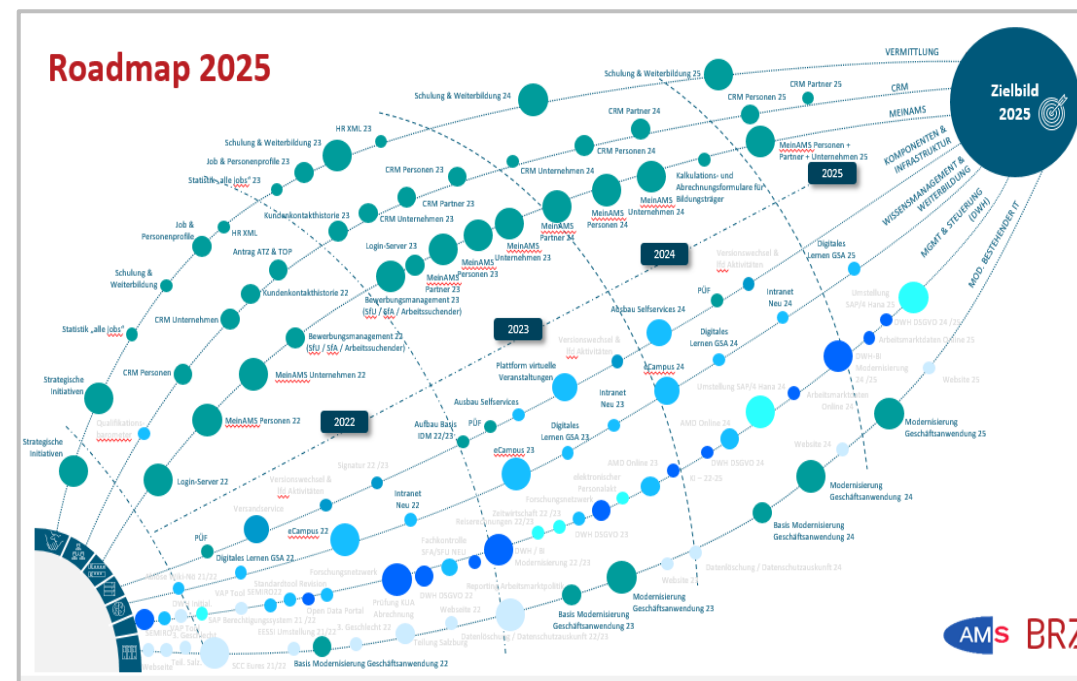

# Learnings

---

- ▶ Stable IT operation is an essential prerequisite for IT modernization.
- ▶ Years of stagnancy cannot be compensated by "big bang" solutions.
- ▶ Applications & system components should be implemented step by step to allow an operable solution at any time.
- ▶ The current application landscape is characterised by complex dependencies. To enable step-by-step modernisation a precise analysis of possible tranches covering these dependencies is necessary.
- ▶ We should not produce more from what already exists.

# IT modernisation

- ▶ **Basis:**  
IT Roadmap 2025, presented to the Administrative Council in December 2021 and to Minister in January 2022
- ▶ **Start:**  
February 2022
- ▶ **Budget:** approx. 20 million € per year
- ▶ **Realisation:**  
in 8 streams and approx. 20 projects per year
- ▶ **Renewal** of over 100 applications in total

# Strategy modernisation

## STRATEGY

After successfully accomplishing the IT transition to BRZ, an **initiative to modernise and digitalise employment services** was launched, focusing on new developments of customer-centric digital services.

The initiative is assessing potentials for optimisation of processes within the AMS for a more efficient handling, transaction and execution of the key subjects of AMS.

The main concept includes the redesign of the core IT-Services to a forward-thinking and future-oriented IT-architecture, ensuring stability and security as well as enabling flexibility to develop new applications.

## KEY SUBJECTS

### Skill Matching

Accelerate job / candidate searching and matching by delivering highly relevant matches based on skills.

### Jobseeker / Job offer profile

Increase data quality on jobseekers / joboffers and provide case workers an opportunity to easily gather relevant key metrics such as experience, education, work time, skills, etc. This includes use of AI-components such as text-parsing to improve data collection.

### AMS HR-XML

Implementation of an API to enable the direct exchange of joboffer and jobseeker data with application management systems of AMS company customers.

### MyAMS

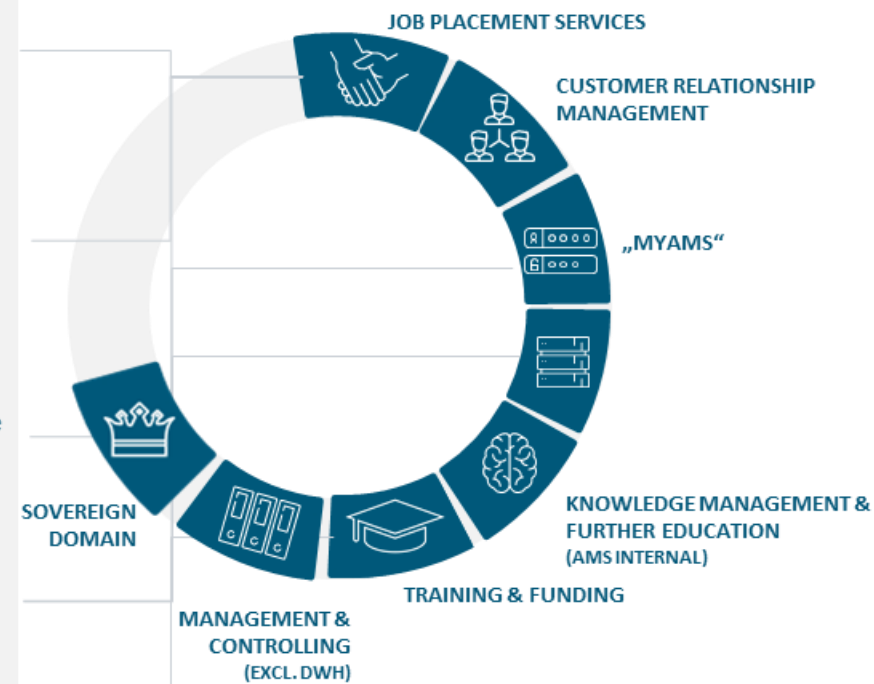

MeinAMS as a new main entry point to access all digital services by using an identification and authentication service based on ID austria and mobile phone signature services.

### „Alle Kurse“

Comprehensive platform of all courses, education, training offers for AMS customers

## VALUE STREAMS

# Procedure for IT modernisation

---

- ▶ The main priority of the **modernisation and digitalisation initiative** planned by **AMS IT** following the successful transition is the redevelopment of customer-oriented IT services.
- ▶ In addition, the potential of **IT support** for optimising processes **within the AMS** is to be exploited in order to enable the AMS to perform its current and future tasks even more efficiently.
- ▶ Through a **simultaneous technical re-design** of the IT systems, a future-proof technical target architecture concept is being developed and implemented in order to meet the growing technical demands on modern IT, such as **stability**, **flexibility** and **security**.

# Strategy for IT modernisation

---

## Our strategy and approach are characterised by three approaches:

1. We think **new**. Not a classic approach, in the sense of "we are improving an existing IT application, but "we are doing something new".
2. We think **functionally**. Evaluation and planning are carried out using specialised focal points.
3. We think **step by step**. The implementation will be gradual and not a "big bang" (all points at once).

# Modernisation principles 1/2

## Organisational design

- Continuous development requires appropriate organisational **resources and roles within the AMS / BRZ**
- Applications & system components should be **implemented step by step** to allow an operable solution at any time
- Realisation takes place in **6-9 month projects** - the time between requirements definition and implementation should be kept as short as possible
- Coordinated and short development cycles allow **early testing by TIM & specialist departments** (ideally within the sprints) and thus ongoing feedback, quick reactions to changes and a reduction in the acceptance phase

## Integration of specialist departments & end users

- **Direct and early** involvement (e.g. usability tests) of the specialist departments and end users for professional exchange with the developers and analysts already during the development phase
- Provision of departmental resources for direct collaboration in projects, including a central specialist contact for prioritisation/decisions (=PO)

## Direct communication & quick decisions

- **Expert working committee** with representatives from the departments, TIM and BRZ, which defines the projects to be implemented on the modernisation roadmap
- Planning on the basis of an approved **modernisation roadmap**
- Coordination and planning between the modernisation projects and regular operations/further developments takes place via **higher-level integrating elements** (committee/roles; e.g. An overarching role in the modernisation programme that brings about a decision within the AMS in the event of differing objectives between projects/departments)

## Transparency & acceptance

- **Ongoing communication measures, demos and marketing** for the people involved in the modernisation and the relevant environments
- Presentation and evaluation of **project progress in defined cycles** in order to be able to react and decide on necessary adjustments at an early stage.
- Where appropriate, **short release cycles** for rapid implementation of customer requirements or legal requirements

# Modernisation principles 2/2

## Creation of new and modern AMS applications and processes

- Orientation towards **state-of-the-art** applications and processes
- Use of **modern technologies** and approaches to ensure a **flexible IT architecture** (e.g. micro services, APIs, containerisation, cloud solutions/components)
- **Security by design** - security and data protection as an integral part of the solution design
- Use and establish **new, meaningful terms** and avoid old technical terms and abbreviations (e.g. ADG / PST)
- **No 1:1 replacement** of old applications and processes
- **Interfaces to new systems** serve as a basis; synchronisation with old applications only takes place when explicitly necessary.
- Modernisation releases are **more important** than standard releases (with the exception of legal changes and justified requirements).

## Reusability & standardisation

- Orientation of the architecture and application components to **state-of-the-art industry standards**
- Focus on **flexibility, simple customisability and cost-efficient further development of** components in order to be able to react quickly to changes in requirements.
- **Reusability** of software, hardware and services to reduce costs, risks and project lead times
- Ongoing review of the use of **BRZ Shared Services** (what the taxpayer has paid once ....)
- **Standard software** is preferred if the majority of the requirements can be covered. Customised development only if functionally / economically necessary

## A central "interface"/data source

- **Standardised (application) system** for AMS consultants and customers - Control of functionality/views through corresponding authorisation system
- Expansion of **self-service options**
- Reduction of additional work for input, data maintenance and inconsistencies through **centralised and shared data storage**

## User friendliness

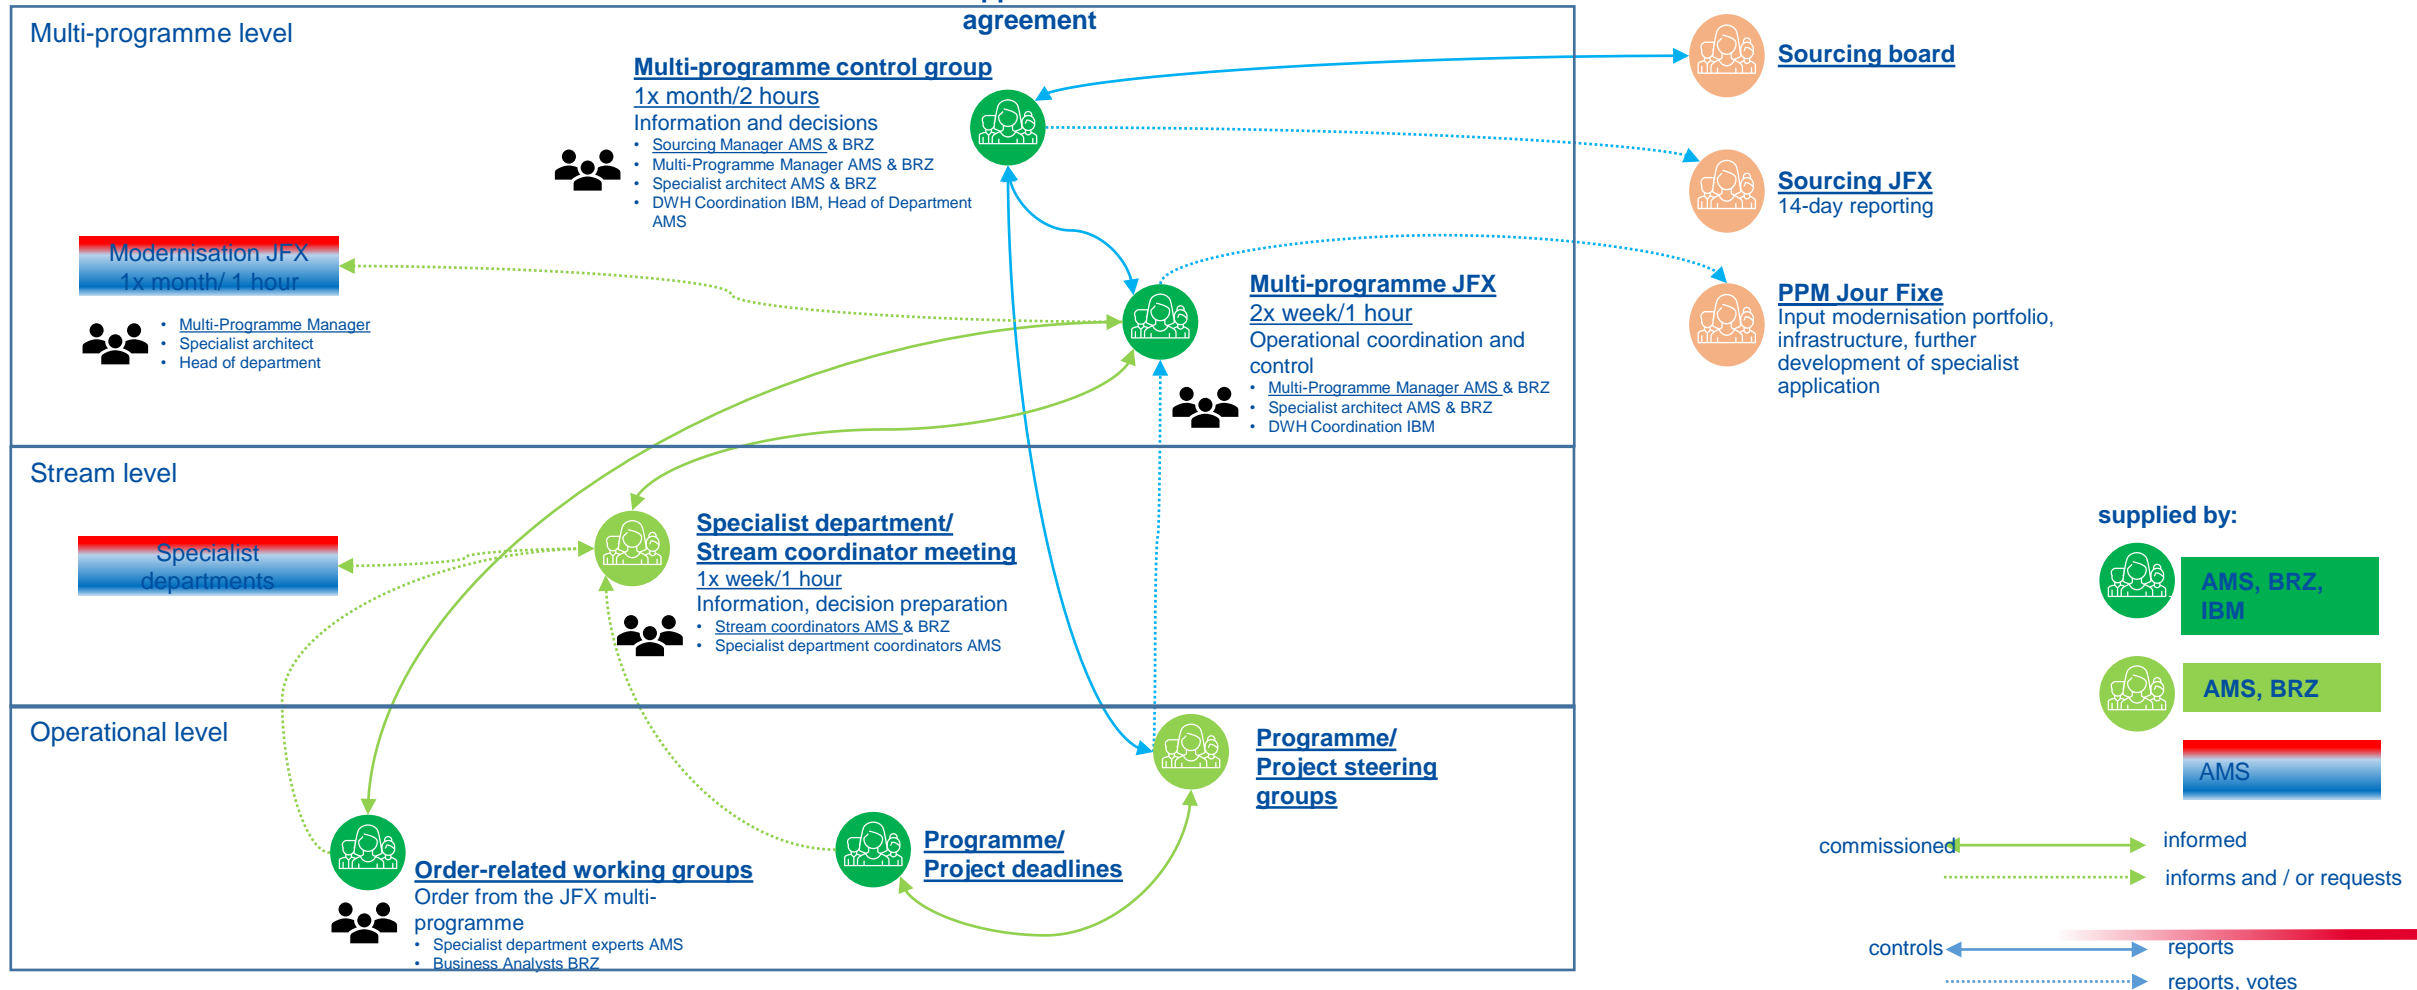

- Simplicity, business value & practicability as pillars of **user-centred application development**
- **Focus on end users and specific user groups** and involve them in the development process
- **Simplification** of business processes and **innovative interface design**
- **Barrier-free** development of new surfaces
- Compliance with the **app strategy** for the new/further development of apps

# IT MODERNISATION - Committees and meetings

## Modernisation-specific meetings

## Modernisation-specific committees according to the rules of the governance model Appendix 5 to the IT framework agreement

## Committees according to the governance model Annex 5 to the IT framework agreement

# Overview Streams 1/2

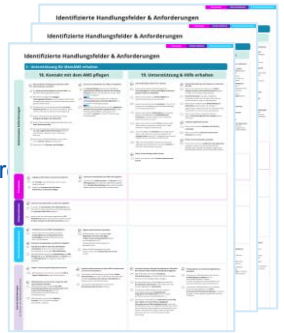

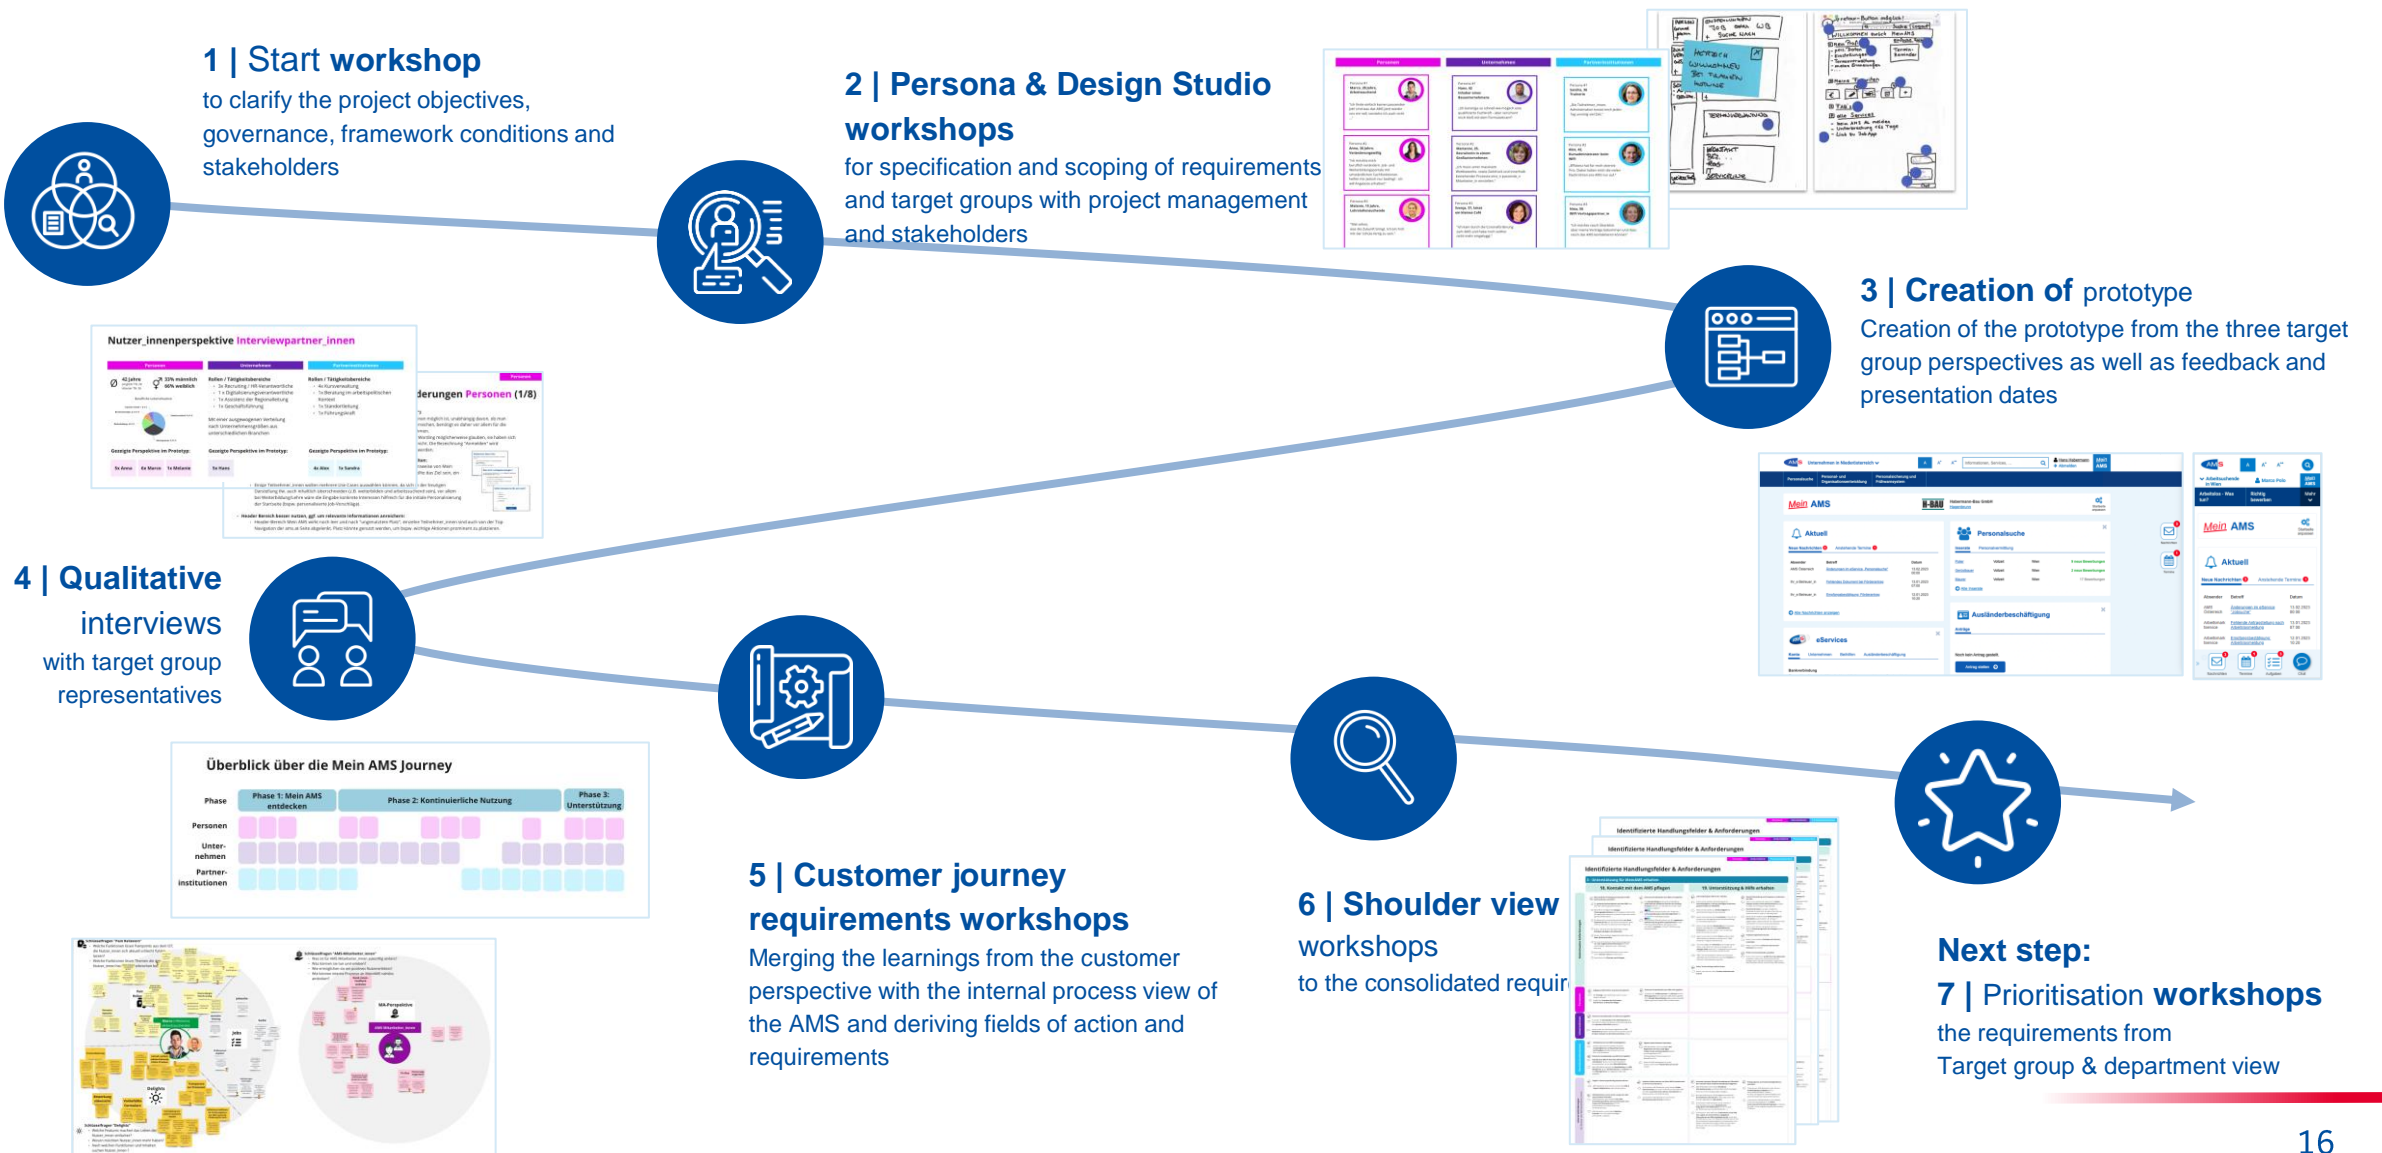

Stream	Vision
Mediation	Matching demand and supply of people and jobs in a skills-oriented manner, including self-service for AMS customers.
Customer relationship management	CRM as support for core processes for simpler, customer-orientated service provision for professional customer care.
MyAMS	Central personalised access on the AMS website and central overview of all eServices (across all streams, e.g. placement, all courses) for <ul style="list-style-type: none"><li>• Customers,</li><li>• Company and</li><li>• Partner institutes</li></ul> regardless of the access device used (e.g. PC, smartphone, tablet) to systematically expand and promote self-service in all three core processes.
Cross-programme components	Creation of a central, state-of-the-art architectural framework as a basis for modernisation to support the "new" world with components that are used across all streams.

# Overview Streams 2/2

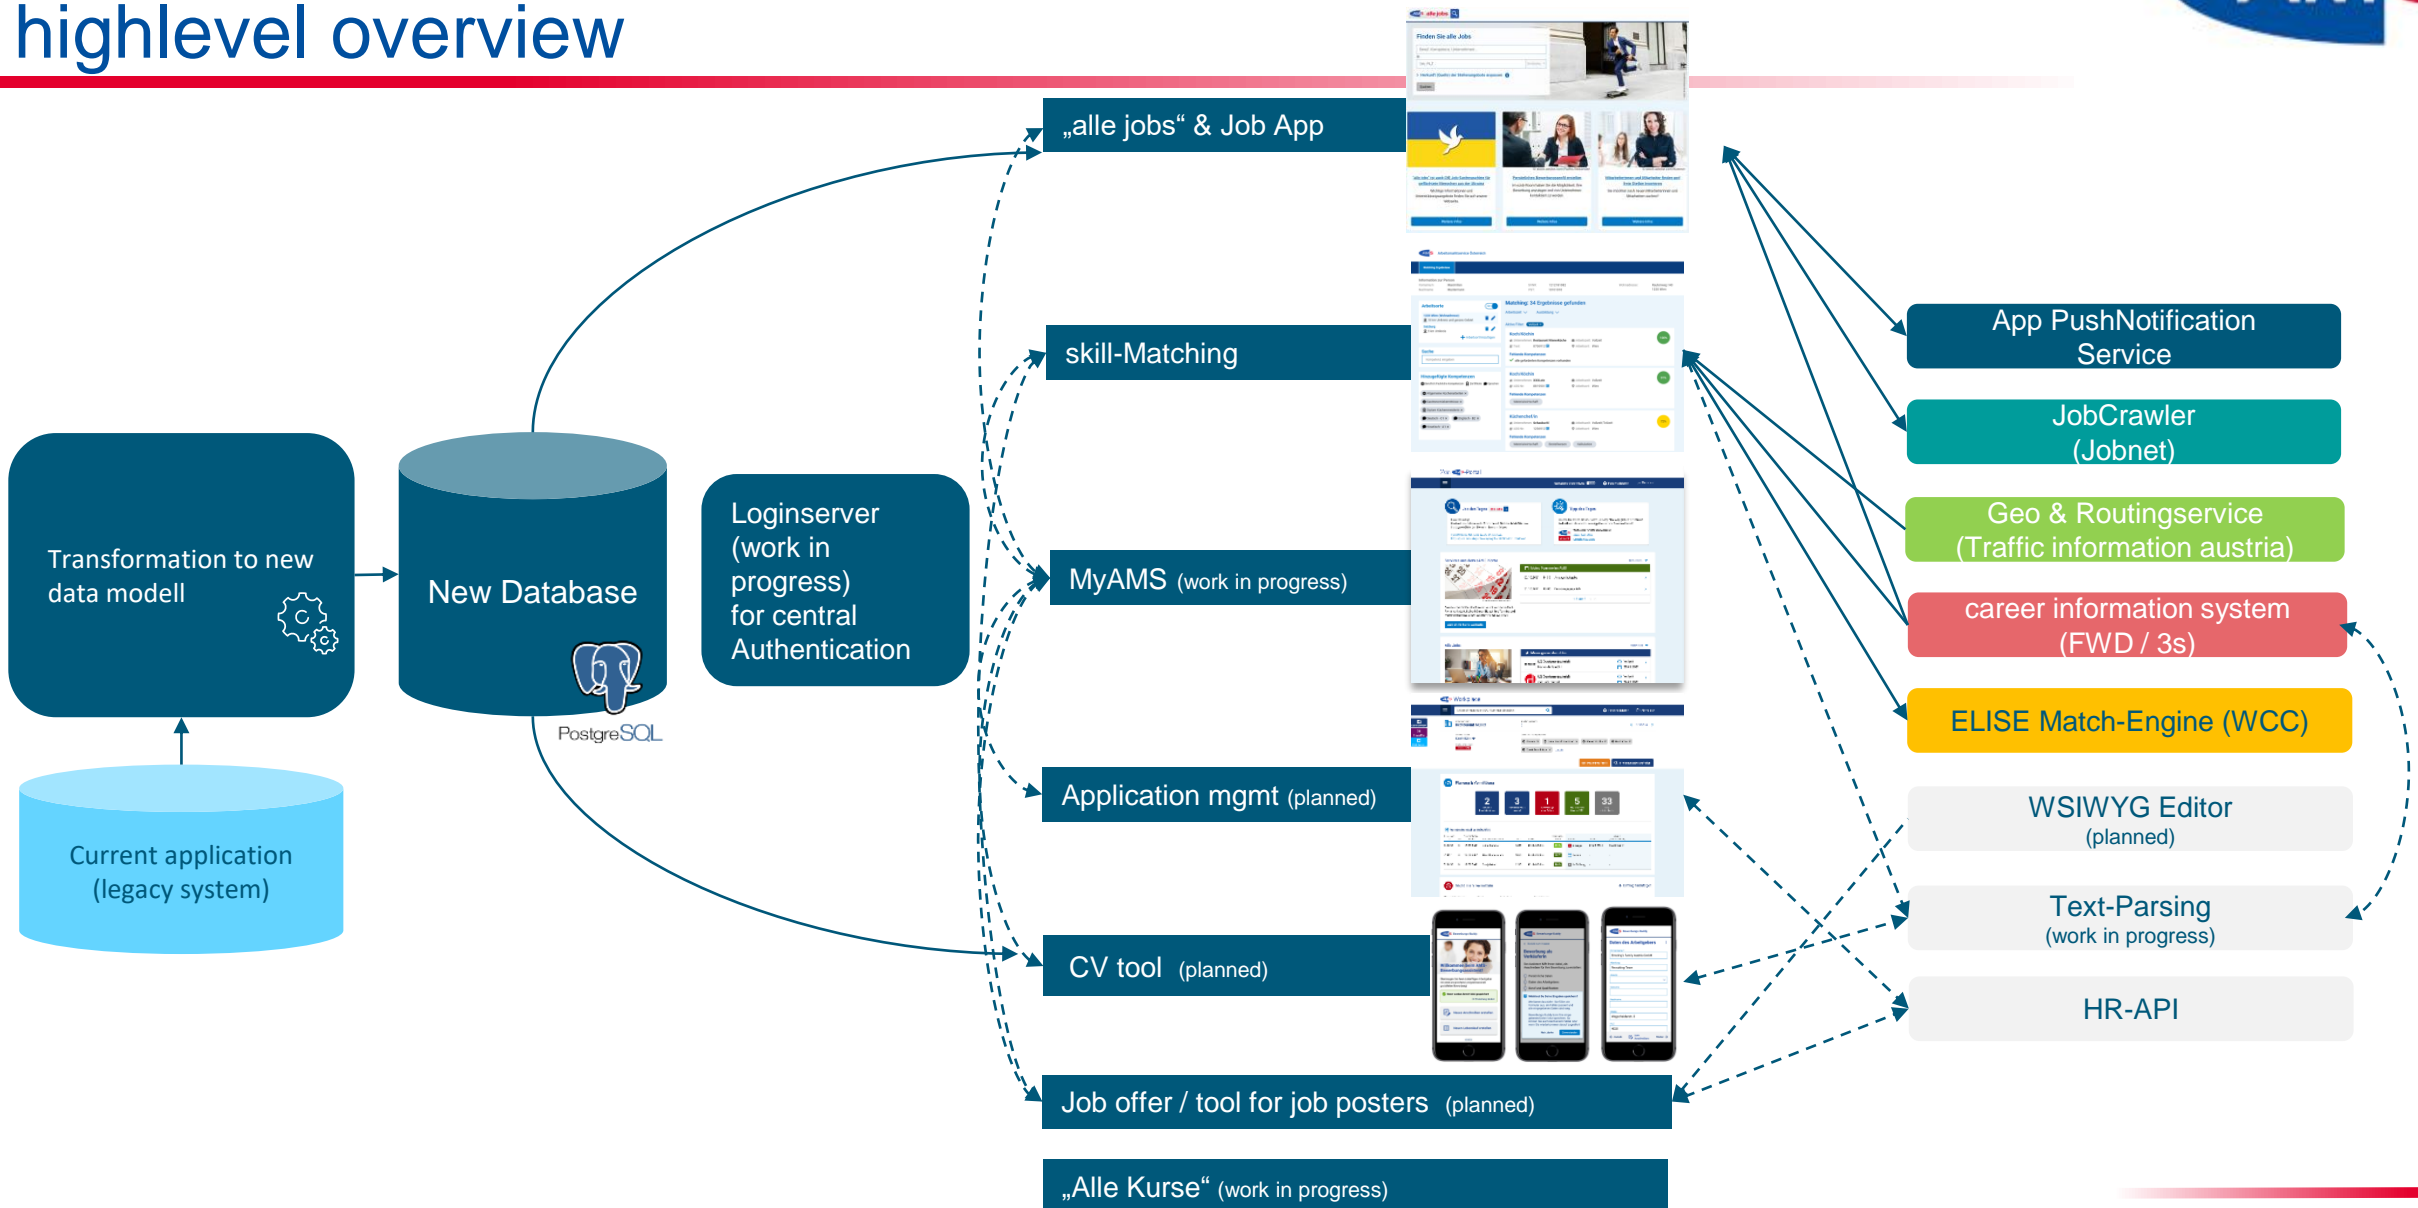

Stream	Vision
<b>Courses &amp; subsidies</b>	Introduction of a comprehensive and holistic tool/portal for AMS funding programmes, vocational training and further education in the independent education market and the underlying workflows.
<b>Knowledge management &amp; further training</b>	The Knowledge Management & Training stream enables comprehensive digitalisation of existing knowledge, communication and learning processes and creates a clear and modern AMS platform landscape for all AMS employees.
<b>Management and control (excl. DWH)</b>	Modernisation of internal control systems to support the support and management processes.
<b>Sovereign area</b>	Forcing automation, simplifying access (no separation, automating interfaces, notifications) as part of a new way of thinking for the topics ALV, ALV2i, ABV with ABA and ABB.

# The process model

# Interfaces legacy & new applications highlevel overview

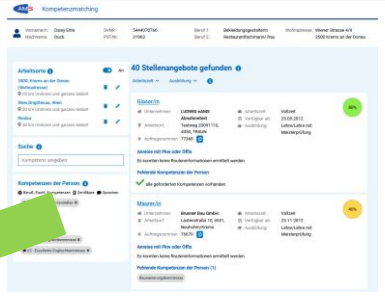

# Development of new applications (extract) functionalities & features

### Skill Matching

Application for AMS clerks to find matchings for job seekers with job offers based on assigned skills.

Elise (WCC) is used as Match Engine.

**finalised**

### Login-Server

Authentication Service

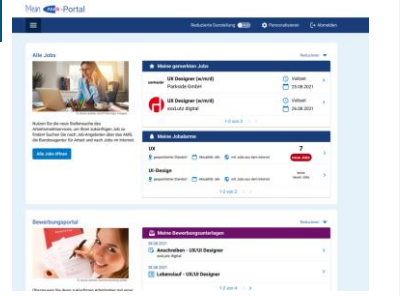

**finalised**

### MyAMS

Central platform to access e-services as an authenticated user.

Authentication via national electronic identity.

**implementation started**

### Alle jobs

External job platform as a service for jobseekers to search for available jobs in Austria.

Jobcrawler provides job offers from Austrian job portals / companies. (including automatic mapping to AMS taxonomy & handling of duplicates)

**finalised**

### Text-Parsing

Implementation and usage of text-parsing to automatically enhance jobseeker and joboffer profiles with skills as well as map data to existing taxonomies

**implementation started**

### "Alle Kurse"

Service for jobseekers and AMS clerks to get an overview of all course, education and training offers

**analysis started**

# „Alle jobs“ | ams job search

## PRODUCT OVERVIEW

“alle jobs” posts listings for job seekers (including AMS job offers and job offers crawled from various Austrian websites)  
Modern responsive and accessible design (conformance to WCAG)  
Free service without user registration necessary

## SOPHISTICATED SEARCH LOGIC

Calibrated / custom designed search relevance with weights and boosts to fine-tune results for jobseekers (including typo-tolerance, stemming, bigrams, and more)  
Supporting geo queries to find relevant results based on locations

## GOALS

Provide a transparent overview on the Austrian labour market  
Easy way to understand and use the “alle jobs” platform to access job offers

The screenshot displays the AMS job search interface. At the top, there is a search bar with the heading "Finden Sie alle Jobs". Below the search bar, there are input fields for "Beruf, Kompetenz, Unternehmen...", "Ort, PLZ, Bundesland", and "Umkreis". A "Suchen" button is located below the search bar. To the right of the search bar, there is a background image of a man in a blue suit running on a skateboard.

Below the search bar, there is a section titled "Alle Jobs in folgenden Bereichen finden:". This section lists several search results with their respective counts:

- [Lehrstellenangebote in Vorarlberg](#) 1461 Ergebnisse
- [Kulturhauptstadt 2024: Jobs in Bad Ischl und Umgebung](#) 1644 Ergebnisse
- [Jobs mit Ausbildungsangebot abseits der klassischen Lehre](#) 618 Ergebnisse
- [Sie sind Wieder- oder Quereinsteiger in?](#) 12794 Ergebnisse
- [Jobs auf den Brettern, die die Welt bedeuten](#) 309 Ergebnisse
- [Jobs mit Ausbildungsangebot in Vorarlberg](#) 131 Ergebnisse
- [Jobs auch für Pensionist\\_innen](#) 180 Ergebnisse
- [In den Sommerferien Berufserfahrungen sammeln?](#) 1402 Ergebnisse

Below the search results, there are three featured job listings:

- "alle jobs" ist auch DIE Job-Suchmaschine für geflüchtete Menschen aus der Ukraine**  
Wichtige Informationen und Unterstützungsangebote finden Sie auf unserer Webseite.  
Button: Weitere Infos
- "alle jobs" ist auch DIE Jobplattform für Pensionist\_innen**  
In "alle jobs" finden Sie Angebote für Menschen, die bereits in Pension sind.  
Button: Direkt zur Suche
- AMS Job App mit "alle jobs": Bleiben Sie auch unterwegs am Laufen**  
Die AMS Job App mit praktischen Funktionalitäten für die mobile Jobsuche.  
Button: Weitere Infos

Replication of the necessary data for ELISE  
 16 AMS / 14 eAMS Tables

My AMS is **the central, personalised access point for all eServices** on the AMS website for **individuals, companies** and **partner institutes**,

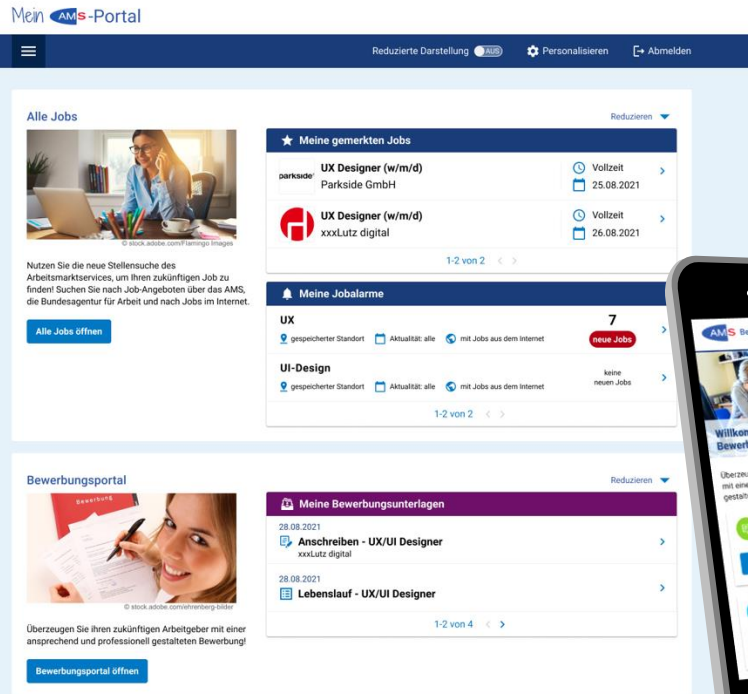

Independent of the access device used (PC or smartphone) the systematic expansion of self-service in all areas.

# „MyAMS“

## MyAMS

MyAMS as a new main entry point to access all digital services by using an identification and authentication service based on ID Austria

Single point entry to access all digital services to increase self service

Secure access by using an identification and authentication service based on ID Austria.

Providing access to various digital services for all AMS Customers, for example:

Create jobseeker / joboffer profiles including individual skill profiles

Additional Job search features for authenticated user (notifications, save search, etc.)

Supported CV & cover letter generation using customised templates

# AMAS - Idea and Development

- ▶ **AMAS\* assists**, the counsellors decide.
- ▶ This **Statistical based tool** gives additional information of the labour market opportunities of jobseekers using data of past AMS customers (labour market relevant characteristics of customers, the observation of their (un-) employment episode (the last 4 years), regional conditions of the labour market). Based on these values, customers are being divided into 3 categories. Special Rules for youth < 25
- ▶ **For the first time**: with AMAS we had a standardised basis for assessing labour market opportunities for customers all over Austria
- ▶ **Developed** from 2015 – 2018. Test period: 2019-1.7.2020
- ▶ **Stopped** by Austrian Data Protection Authority in August 2020

\* AMAS\_Arbeitsmarktchancen Assistenz-System: Supporting system to assess Labour Market Opportunities

# AMAS - Status Quo and Challenges

---

- ▶ Dec. 2020: Federal Administrative Court (FaC) overruled the decision of the Data Protection Authority.
  - ▶ Dec. 2023: The Supreme Administrative Court has referred the case back to the FaC and cites an CJEU\* **case from 7. Dec. 2023** in its decision.
- >>> We **lost 3 years** and the judicial procedure continues.

## European Challenges:

- ▶ legal certainty for public organisations to use big data and AI
- ▶ US companies and China know more about our citizens than we
- ▶ Public debate: dominated by fake news, fears and inability to distinguish: discrimination in the labour market is to blame, not the tool, that reports it.

**Thank you for the interesting exchange!**
